About this series

In this exactphilosophy.net series of pocket books, I hope to convey some fascinating novel ideas and findings, roughly one topic per tome, both in very simple words and beautifully presented with color illustrations.

Other than on my website, which is rather focused on researching fundamental questions, here I try to keep things as simple as possible to carve out each idea.

Feel free to start with any tome, while the first tome presents sort of an overarching idea, which may or may not be how it “really” is; I am not sure, but remain curious.

All tomes are available for free on my website in digital form and in print as pocket books from bookstores.

Enjoy fantastic new worlds !

Alain Stalder (*1966 in Zürich, PhD in physics)

Preface

...

A first glimpse at an interesting new way of seeing the world and life.

Inspired by how ancient Greeks and others in antiquity started to look at the world, enriched by ideas from later centuries, and already from the start in accordance with natural sciences.

The idea is to come from immediate personal experience of what happens in what seems to be an “outside” and “inside”. This leads quickly to concepts that remind of the ancient Greek elements and also of deities, but reformulated in a seemingly evident way that would seem to be basically compatible with today’s science.

Alain Stalder is a Swiss physicist (*1966 in Zürich).
