About this series

In this exactphilosophy.net series of pocket books, I hope to convey some fascinating novel ideas and findings, roughly one topic per volume, both in very simple words and beautifully presented with color illustrations.

Other than on my website, which is rather focused on researching fundamental questions, here I try to keep things as simple as possible to carve out each idea.

Feel free to start with any volume, while the first one presents sort of an overarching idea, which may or may not be how it "really" is; I am not sure, but remain curious.

All volumes are freely available on my website in digital form already while writing and once finished usually also as printed pocket books from your favorite bookstores.

Enjoy fantastic new worlds!

Alain Stalder (*1966 in Zürich, PhD in physics)

Volume 2 explores the idea that, in analogy to the cells in a human body, humans would also collectively form "higher lifeforms".

Cells in the human body interact and the same is true about people in daily life in various ways. So, why would humans not collectively create composite beings that would have thoughts, feelings, plans, dreams and desires of their own? Maybe multiple such beings at different scales, some culturally divided, and likely also including all other living beings on this planet?

Such beings would remind of deities and also of similar concepts, like C.G. Jung's collective unconscious or the old idea of a world soul.

Alain Stalder is a Swiss physicist (*1966 in Zürich).
