About this series

In this exactphilosophy.net series of pocket books, I hope to convey some fascinating novel ideas and findings, roughly one topic per volume, both in very simple words and beautifully presented with color illustrations.

Other than on my website, which is rather focused on researching fundamental questions, here I try to keep things as simple as possible to carve out each idea.

Feel free to start with any volume, while the first one presents sort of an overarching idea, which may or may not be how it "really" is; I am not sure, but remain curious.

All volumes are freely available on my website in digital form already while writing and once finished usually also as printed pocket books from your favorite bookstores.

Enjoy fantastic new worlds!

Alain Stalder (*1966 in Zürich, PhD in physics)

Volume 6 explores the thesis that we would be living in times symbolically shaped by the themes and mythology around Sedna.

The times since the discovery of Pluto in 1930 are often seen by astrologers as influenced by his themes, like nuclear power and more. Might Sedna with her discovery in 2003 have taken over, as the next relatively big object clearly further out? For example, that consequently #MeToo would have started to curb plutonic male sexual power since around then?

Many more examples even feed the suspicion that Venus might have secretly yielded Libra to Sedna as her astrological domicile. Who knows?

Alain Stalder is a Swiss physicist (*1966 in Zürich).
