About this series

In this exactphilosophy.net series of pocket books, I hope to convey some fascinating novel ideas and findings, roughly one topic per volume, both in very simple words and beautifully presented with color illustrations.

Other than on my website, which is rather focused on researching fundamental questions, here I try to keep things as simple as possible to carve out each idea.

Feel free to start with any volume, while the first one presents sort of an overarching idea, which may or may not be how it "really" is; I am not sure, but remain curious.

All volumes are freely available on my website in digital form already while writing and once finished usually also as printed pocket books from your favorite bookstores.

Enjoy fantastic new worlds!

Alain Stalder (*1966 in Zürich, PhD in physics)

Volume 7 shows that astrological methods have detached so much from the physical objects in the sky that “as above, so below” can no longer be considered true.

What seems true is “as horoscope, so below”, namely that the methods and interpretations astrologers use work in the sense of mirroring how people are and what happens to them. This implies that astrology cannot be related to the physical night sky in any significant way.

Ever since Enlightenment, with the great schism between astrology and astronomy, astrologers have ignored this and scientists have used this as an excuse to look away, thus putting theory above experiment, which is unscientific. I hope this book can help to heal this Uranian divide.

Alain Stalder is a Swiss physicist (*1966 in Zürich).
