About this series

In this exactphilosophy.net series of pocket books, I hope to convey some fascinating novel ideas and findings, roughly one topic per volume, both in very simple words and beautifully presented with color illustrations.

Other than on my website, which is rather focused on researching fundamental questions, here I try to keep things as simple as possible to carve out each idea.

Feel free to start with any volume, while the first one presents sort of an overarching idea, which may or may not be how it "really" is; I am not sure, but remain curious.

All volumes are freely available on my website in digital form already while writing and once finished usually also as printed pocket books from your favorite bookstores.

Enjoy fantastic new worlds!

Alain Stalder (*1966 in Zürich, PhD in physics)

Volume 8 teases with new approaches to prove astrological correlations.

Besides the general idea to use big data and “AI”, which will likely be the mainstream path that science would tread one day, I present also two ideas that require less resources to investigate, but might already convince.

One idea is around return charts of Saturn, the other one around aspects of Venus and Saturn related to “funky” in music.

Alain Stalder is a Swiss physicist (*1966 in Zürich).
